

## Proposed Strategies for the Edmonds Climate Action Plan

Buildings & Energy			
Strategy	Name and Description	Assumptions	Potential GHG Emissions Reductions
EY-1	<p><b>Replace Fossil Fuels with Renewable Energy Resources: Solar Installations.</b> Promote the installation of renewable energy projects with the City via a) adopting appropriate zoning allowances; b) encouraging and supporting state legislators to sponsor appropriate bills; and c) creating financial assistance programs.</p>	<ul style="list-style-type: none"> <li>• Average solar installation size of 9 kW; 164 systems in Edmonds in 2018</li> <li>• 600 solar PV systems installed in new residential units and 30 solar PV systems installed in new commercial units by 2035</li> <li>• 1,200 solar PV systems installed in new residential units and 100 solar PV systems installed in new commercial units by 2050</li> <li>• The regional electric grid must be carbon neutral by 2030, therefore additional renewable local electric generation does not reduce GHG emissions beyond that date but may help utilities reach that requirement.</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 0</p>
			<p><b>Annual GHG Emissions Savings by 2050</b> 0</p>
EY-2	<p><b>Improve Efficiency of Existing Buildings and Infrastructure.</b> Promote a building retrofit program for improving energy efficiency to reach a long-term goal of 55% per capita reduction in energy consumption by a) creating a financial assistance program operated by the City alone or jointly with utilities and energy companies to provide the incentive for overcoming upfront installation costs; b) developing a program for contractor certification; and c) updating the permitting procedures and methodology to streamline the process. Improve energy efficiency of municipal operations and public infrastructure. Continue to make improvements to wastewater treatment plant.</p>	<ul style="list-style-type: none"> <li>• Assumes 10% of electricity savings per retrofit and 25% of natural gas energy savings per retrofit</li> <li>• Conversion of natural gas appliance to electric after 2030 results in 100% reduction in GHG emissions for that appliance.</li> <li>• 18% of residential square feet (6,000,000 sq. ft.) upgraded and 18% of commercial square feet (1,200,000 sq. ft.) upgraded by 2035</li> <li>• 33% of residential square feet (12,000,000 sq. ft.) upgraded and 33% commercial square feet (2,300,000 sq. ft.) upgraded by 2050</li> <li>• All GHG reductions after 2030 would be the result of energy conservation in buildings still served by fossil fuels (e.g. heating, hot water, cooking).</li> <li>• Wastewater treatment plant improvements are those that were already funded in 2017 and no additional improvements were assumed.</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 3,157 metric tons of CO<sub>2</sub>e</p>
			<p><b>Annual GHG Emissions Savings by 2050</b> 6,253 metric tons of CO<sub>2</sub>e</p>
			<p><b>Wastewater Treatment Plant Annual GHG Emissions Savings</b> 417 metric tons of CO<sub>2</sub>e</p>

EY-3	<p><b>Improve Efficiency of New Buildings.</b> Encourage meeting at least Silver-level LEED standards or equivalent for all new residential and commercial buildings, including landscaping, as well as any major commercial remodeling projects. Increase the LEED-level requirement as technology and economy dictates.</p>	<ul style="list-style-type: none"> <li>Assumes a similar mix of electric and gas appliances as is currently employed- roughly evenly split between electric and gas.</li> <li>20% of new residential development, and 75% of commercial development expected to be LEED-Certified by 2035</li> <li>75% of new residential development, and 100% of commercial development expected to be LEED-Certified by 2050</li> <li>30% of energy savings expected from LEED-certified buildings, and 50% energy savings from Gold and Platinum LEED-certified buildings</li> <li>LEED relates to conserving both electricity and fossil fuel, but GHG reductions after 2030 are due to fossil fuel conservation</li> <li>By 2050, buildings built after 2017 will be approximately 20% of total residential floor area, and 9% of non-residential floor area</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 658 metric tons of CO2e</p>
			<p><b>Annual GHG Emissions Savings by 2050</b> 3,034 metric tons of CO2e</p>

**Waste & Natural Resources**

Strategy	Name and Description	Assumptions	Potential GHG Emissions Reductions
EY-4	<p><b>Increase Carbon Sequestration.</b> Maintain, and wherever possible, expand our urban forests.</p>	<ul style="list-style-type: none"> <li>5,000 additional trees in Edmonds by 2035</li> <li>10,000 additional trees in Edmonds by 2050</li> <li>Restoration of the Edmonds marsh may result in net sequestration, but this cannot be quantified without additional study</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 161 metric tons of CO2e</p>
			<p><b>Annual GHG Emissions Savings by 2050</b> 262 metric tons of CO2e</p>
W-1	<p><b>Reduce Material Consumption.</b> Research a zero-waste goal and develop a zero-waste strategic plan for Edmonds.</p>	<ul style="list-style-type: none"> <li>In 2017, solid waste generation in Edmonds was approximately 770 pounds per person.</li> <li>73% of Edmonds GHG emissions from waste come from solid waste</li> <li>25% reduction in solid waste generated by 2035</li> <li>50% reduction in solid waste generated by 2050</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 1,086 metric tons of CO2e</p>
			<p><b>Annual GHG Emissions Savings by 2050</b> 2,172 metric tons of CO2e</p>

Transportation			
Strategy	Name and Description	Assumptions	Potential GHG Emissions Reductions
TR-1	<p><b>Reduce vehicle miles traveled (VMT) through sustainable land use.</b> Support mixed-use development in neighborhood commercial centers to encourage close-to-home local shopping and employment opportunities.</p>	<ul style="list-style-type: none"> <li>2,100 additional units in commercial and multi-family centers by 2035 (80% of all expected multifamily units)</li> <li>3,200 additional units in commercial and multi-family centers by 2050 (85% of all expected multifamily units)</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 3,347 metric tons of CO<sub>2</sub>e</p>
			<p><b>Annual GHG Emissions Savings by 2050</b> 3,400 metric tons of CO<sub>2</sub>e</p>
TR-2	<p><b>Reduce VMT by improving transit systems.</b> Coordinate with Community Transit, Sound Transit, and WSDOT to pursue funding opportunities to increase transit service and improve convenience to encourage greater ridership.</p>	<ul style="list-style-type: none"> <li>About 25% of all VMT comes from commuting.</li> <li>In 2035, business as usual commuting VMT in Edmonds is projected to be 75million, and by 2050, it would be 83 million.</li> <li>20% of commuters using transit by 2035</li> <li>30% of commuters using transit by 2050</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 3,160 metric tons of CO<sub>2</sub>e</p>
			<p><b>Annual GHG Emissions Savings by 2050</b> 4,433 metric tons of CO<sub>2</sub>e</p>
TR-3	<p><b>Reduce VMT by promoting active transportation.</b> Increase bicycle parking, lanes, and trails that connect commercial and mobility hubs in concert with the City’s transportation plan.</p>	<ul style="list-style-type: none"> <li>In 2017, 2.4% were biking or walking to work.</li> <li>5% of commuters walking or biking to work by 2035</li> <li>12% of commuters walking or biking to work by 2050</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 734 metric tons of CO<sub>2</sub>e</p>
			<p><b>Annual GHG Emissions Savings by 2050</b> 2,007 metric tons of CO<sub>2</sub>e</p>
TR-4	<p><b>Promote carpooling and vehicle-sharing.</b> Promote and facilitate, where necessary, shared vehicles used, such as school carpooling and vehicle-on-demand parking spaces.</p>	<ul style="list-style-type: none"> <li>In 2017, 9.3% of commuters in Edmonds were carpooling</li> <li>4% reduction in commute VMT by utilization of an alternate work week, and 15% of commuters carpooling by 2035</li> <li>6% reduction in commute VMT by utilization of an alternate work week, and 25% of commuters carpooling by 2050</li> <li>Due to the pandemic, in August 2020, the work-from-home rate for white employees was 26%, 19% among Hispanic workers, and 9.4% for Black workers</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 2,737 metric tons of CO<sub>2</sub>e</p>
			<p><b>Annual GHG Emissions Savings by 2050</b> 4,538 metric tons of CO<sub>2</sub>e</p>

<p>TR-5</p>	<p><b>Promote electric vehicles.</b> Work with local vehicle dealers to further promote hybrid/electric vehicles within the community.</p>	<ul style="list-style-type: none"> <li>• Currently, there are about 37,000 cars registered in Edmonds</li> <li>• In December 2017, about 370 were electric vehicles (battery or plug-in hybrid). By December 2020, the number had doubled</li> <li>• Based on PSRC data, it is assumed there would be about 42,000 cars in Edmonds by 2035, and 45,000 cars by 2050</li> <li>• 9,000 electric vehicles in Edmonds and 21.3% of the City’s fleet converted to electric by 2035</li> <li>• 15,000 electric vehicles in Edmonds and 33.4% of the City’s fleet converted to electric by 2050</li> <li>• Automobiles remain in use for 15 years or longer, so to reach 100% reduction in GHG by 2050, fossil-fuel-reliant vehicle sales would have to end by approximately 2035</li> </ul>	<p><b>Annual GHG Emissions Savings by 2035</b> 20,713 metric tons of CO<sub>2</sub>e</p> <hr/> <p><b>Annual GHG Emissions Savings by 2035</b> 24,469 metric tons of CO<sub>2</sub>e</p>
